Frontend Developer | Next, React, TypeScript, Redux Toolkit , php

Summary

Software Engineering student and dedicated Frontend Developer with a strong focus on system architecture, performance optimization, and clean code principles. Proficient in building scalable, secure, and high-performance web applications using the Next.js and React ecosystem. Experienced in managing complex authentication flows (JWT/Tokens), integrating RESTful APIs, and implementing role-based access control (RBAC). Possesses solid foundational knowledge of backend logic and data handling using PHP, bridging the gap between sophisticated UI/UX and efficient server communication to deliver seamless web solutions.

Technical Skills

Languages: TypeScript, JavaScript (ES6+), PHP (Core).
Frontend: React.js, Next.js (App Router), Redux Toolkit, Tailwind CSS, Framer Motion, SCSS.
API: RESTful API Integration, Authentication (JWT, Axios Interceptors, Refresh Tokens), Session Management.
Tools & Other: Git, Vite, GitHub Actions, Responsive Design, Architectural Patterns.

Projects

CareSync — Healthcare Management System Yo 2026 -- Present

Next.js • TypeScript • Tailwind CSS • Redux Toolkit • Strapi

Architected a role-based healthcare dashboard, managing distinct access levels (Admin/Nursing Staff) to ensure secure data flow. Implemented secure authentication logic using JWT, incorporating Axios interceptors to manage token refresh cycles and session persistence.
Developed dynamic, filtered data views and task tracking modules, ensuring seamless interaction between the client-side interface and backend API.
Designed a modular component architecture that allows for easy scaling as the system requirements grow.

Team Dashboard — Task Monitoring & Member Profiles Feb 2026 -- Mar 2026

Next.js • TypeScript • Tailwind CSS • Redux Toolkit

· Built a comprehensive admin dashboard for team management, featuring real-time task monitoring, individual member profiles, and progress tracking.

- Implemented role-based data views and interactive filters, enabling managers to quickly assess workload distribution and task completion rates.
- Designed a modular component architecture using Next.js App Router and Redux Toolkit for predictable state management across multiple dashboard panels.
- Styled entirely with Tailwind CSS, ensuring a fully responsive layout across desktop, tablet, and mobile devices without sacrificing functionality.

Horizon Market — Full-Featured E-Commerce Platform

React.js • Framer Motion • React Router • Modern CSS

- Developed a dynamic e-commerce application featuring advanced product filtering, live search functionality, and a persistent shopping cart that retains user preferences using local storage.
- Implemented smooth multi-page navigation with React Router, eliminating page reloads and enhancing perceived performance.
- Integrated Framer Motion animations for product card hover effects, cart interactions, and page transitions, creating a polished, app-like user experience.
- Architected a responsive product grid system with detailed product views, variant options, and an optimized image loading strategy.

University Student Portal — Static Showcase Website

React • TypeScript • Tailwind CSS • Framer Motion

- Designed and developed a visually engaging university portal featuring animated landing sections, program showcases, and a student-focused information architecture.
- Leveraged TypeScript for type-safe component development, reducing potential runtime errors during the build phase.
- Created custom scroll-triggered animations with Framer Motion to guide users through program highlights and admission information.

Typing Speed Challenge — Interactive Test Application

Vanilla JavaScript (ES6+) • HTML5 • CSS3

- Built a typing speed test from scratch using pure JavaScript, featuring real-time WPM (Words Per Minute) calculation, accuracy tracking, and dynamic error highlighting.
- Implemented a high-score leaderboard stored in the browser's local storage, allowing users to track personal bests across sessions.
- Designed a countdown-based challenge mode with difficulty levels, demonstrating strong logic-building skills without relying on any frameworks.

Weather Forecast App — Real-Time Data Dashboard

Vanilla JavaScript (ES6+) • REST APIs • Responsive CSS

- Engineered a weather dashboard that fetches real-time data from external APIs based on city search input.
- Handled asynchronous data retrieval using Fetch API and Async/Await, with graceful error handling for failed requests or invalid city names.
- Displayed 7-day forecasts with hourly breakdowns, including dynamic icons and temperature trend visualization.
- Ensured full cross-browser compatibility and mobile responsiveness through custom CSS media queries.

Education

Bachelor of Information Engineering

Syrian Virtual University (SVU)

2024 – Present (Expected Graduation: 2029)

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Fundamentals, Software Engineering, Logic Design

Self-Directed Learning: Continuously advancing through modern frontend technologies, web architecture patterns, and currently expanding into full-stack development with ASP.NET Core.
